

Quick Deployment Checklist

Pre-Deployment

- ☐ Repository created on GitHub
- ☐ Code pushed to `main` branch
- ☐ GitHub Actions enabled in repository settings
- ☐ Workflow permissions set to “Read and write permissions”

Configuration

- ☐ Repository name matches configuration (or updated accordingly)
- ☐ Contact form email address updated in `components/contact-form.tsx`
- ☐ All image paths use relative paths starting with `/`

Deployment Steps

1. Enable GitHub Pages:

Repository Settings → Pages → Source: GitHub Actions

2. Trigger Deployment:

```
bash
```

```
git push origin main
```

3. Monitor Progress:

Repository → Actions tab → Watch deployment

4. Verify Site:

Visit: `https://USERNAME.github.io/REPO-NAME/`

Post-Deployment Verification

- ☐ Homepage loads correctly
- ☐ All navigation links work
- ☐ Attorney profile pages load
- ☐ Contact forms open email client
- ☐ Mobile responsiveness works
- ☐ All images display properly

Common Fixes

404 Errors:

- Check file paths are case-sensitive
- Verify routing configuration

Styling Issues:

- Clear browser cache
- Check base path configuration

Images Not Loading:

- Ensure images are in `public/` directory
- Use paths starting with `/`

Deployment URL: `https://YOUR_USERNAME.github.io/YOUR_REPO_NAME/`
